

DARREN JAMES

It's got double the manpower

Parade College students Mark and James demonstrate the man-powered car they designed and built at the Bundoora campus. The students created the vehicle so they could join the RACV's Energy Breakthrough, which was set to begin in Maryborough on November 20. The event includes races and test events that attract school students from across Australia as well as thousands of spectators. Competitors can compete in one of five categories: human-powered vehicles, hybrid-powered people carriers, pushcarts, innovations in technology and the try-athlon.
